Exercice 6:

```
#include <stdlib.h>
#include <stdio.h>

int Addition(int a, int b){return a+b;}
int soustraction(int a, int b){return a-b;}
int multiplication(int a, int b){return a*b;}

int division(int a, int b){
    if(b==0){printf("You can't divide by zero");
             return -1;}
    else return a/b;
}
void ~~Addition~~()
Void input(int *a, int *b){
    printf("Enter a:");
    scanf("%d", a);
    printf("Enter b:");
    scanf("%d", b);
}
Void menu(){
    Printf("Type ~~1~~ for addition");
    Printf("Type 2 for soustraction");
    printf("Type 3 for multiplication");
    printf("Type 4 for division");
}
int chooseFunction(){
    int choice;
    do{ menu(); printf("Enter choice:");
        scanf("%d", &choice);
    }while(choice!=1 && choice!=2 && choice!=3 && choice!=4);
    return choice;
}
```

```
int main(){
    printf("welcome to Calculator");
    int choice = chooseFunction();
    switch(choice
     int a, b;
     input(&a, &b);
     switch (choice){
      case 1: addit
          printf("%d + %d = %d", a, b, addition(a,b));
      case 2:
       printf("%d - %d = %d", a, b, substraction(a,b));
      case 3:
       printf("%d * %d = %d", a, b, multiplication(a,b));
      Cas 4:
       printf("%d / %d = %d", a, b, division(a,b));

       }
      printf("Take care");
}
```
